Content Uploader:

Looking so much better
Move the block buttons to the left so that it's in easy reach. Most stuff is happening on the left of the screen.
Please make it a live preview, not after it's saved.
Give me an option to toggle the preview please, especially as there sometimes isn't content yet.
Maybe the toolbar could pop up when you click on an equation block?
It would be better if I didn't have to do too much scrolling.
Please use images instead of words for buttons.
Can you make the uploaded images resized so that they look like what it would look like on a phone?
Might be better to put some buttons under tabs instead of a long scrollable list.

NB! Content creator doesn't realise that this stuff is only going to be looked on a phone. So they put in really big images and then student's can't see the details on the phone. This might help them realise that they can't see stuff.
