2016-11-03

Present: Melissa Densmore
Nathan Begbie
Ethan Marrs

Nathan's Notes

Send Melissa the details

Melissa out for 17th to 26th

Need to arrange the hand off meeting. Would be good to include Melissa. See if we can add her via Skype.

Add a check for the cache memory for phone, if it is then serve fonts.

Ethan still struggling with how to draw conclusions.
> When you frame the metrics - they weren't clearly
> If you want to be scientific. Qualify how your metrics were smart. Qualify them more. You have concrete things.
> You have different architecture. Compare strengths and weaknesses of the s/ware architecture. Compare the results.

In the notes - coupling. Isolate what the requirements were and make sure that those.

One approach for the compression - have your own renderer. Only include the images that are used. Send only the font library of the things that are used. To investigate further . . .

Toolbar

- constrained UI
- features could just do s/ware metrics like the burn chart
- could reflect on the process - what it did in terms of scope creep
- say what the methods were in terms of unit tests. Make the statement somewhere. State what your process was.

Need to complete marking rubric

Content Delivery

Ethan's Notes

How to Improve Results
- Architecture strengths and weaknesses
- Architecture requirements alignment with Praekelt
- Reflect on project engineering process
- Testing methodology
